SPECIFIER	Huntsman Architectural Group
PRODUCTS	LLI-N5.5W-68-SXXS-30K LED Neon

CHALLENGE

The central atrium of the Science and Technology Park serves as the social heart of the facility, connecting multiple floors in an open vertical space. Designers planned for sleek, modern perimeter lighting with a high output but low profile to enhance the open design while complimenting the natural daylight. Deadlines were tight and run lengths needed to be exact.

SOLUTION

Specifiers chose LLI-N5.5W-68-SXXS-30K LED Neon to seamlessly integrate into the atrium's multiple floors. High-touch collaboration with the specification and product teams at LLI Architectural Lighting ensured precision run lengths and output with a fast turnaround. The result is a innovative, welcoming space with a modern design aligned with the building's scientific mission.
