

LOCATION	Atlanta, Georgia
REP	Lighting Associates
SPECIFIER	ASD SKY
PRODUCTS	Thin Extrusion LTP2.5W Tapelight

CHALLENGE

The project featured curved stairs, bleachers, and other custom architectural elements that were fabricated on-site, making precise dimensions unavailable until construction was complete. The lighting solution needed to accommodate field measurements, ship quickly to keep the project on schedule, and provide seamless, end-to-end illumination while coordinating with multiple linear lighting applications throughout the space.

SOLUTION

The Thin extrusion paired with LTP2.5W LED tapelight provided a field-cutable solution that could be easily customized on-site once final dimensions were confirmed. The Thin extrusion with LTP2.5W delivered clean, continuous illumination while allowing the installation team to achieve a precise fit and a cohesive lighting aesthetic across the project's curved and linear architectural features.
