

SAFETY INFORMATION

WARNING: Do not connect directly to high voltage power (120V-277V). Use only with 24V DC hardwire or plug-in power supply. Factory warranty will be void if used otherwise.

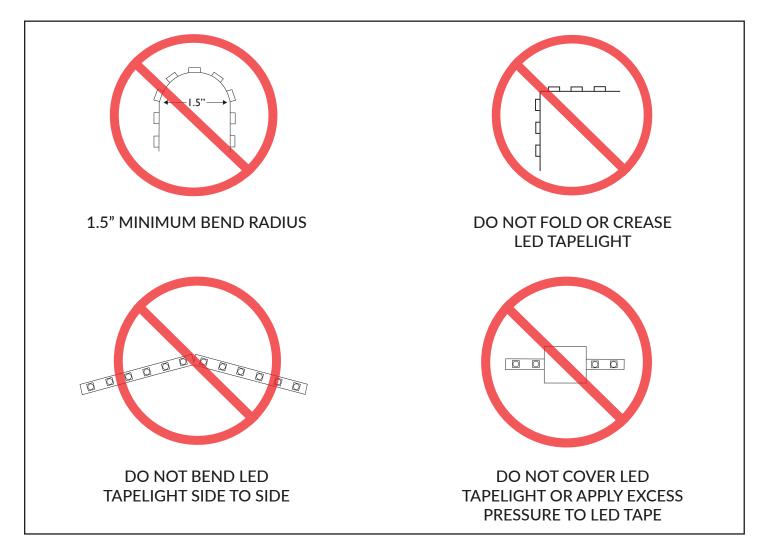

- Read complete instruction.
- These products may represent a potential shock or fire hazard if improperly installed or attached in any way. Products should be installed in accordance with these instructions, local electrical codes and the National Electric Code (NEC).
- Do not energize LED tapelight when rolled up in its spool.
- Uncoated products are intended for indoor use in dry locations. Coated products are intended for outdoor use or in damp/wet locations. Refer to product spec sheet for location ratings.
- Do not use if there is any damage to the unit or to the wiring/insulation. Inspect periodically.
- Do not route cords or LED tapelight through walls, doors, windows or any similar part of a building structure.
- Do not secure LED tapelight or its power cord with staples, nails, or any other sharp objects that may cause damage.
- Do not install LED tapelight closer than 6" to combustible material.
- Ensure proper gauge wires are installed between Power Supplies, Controls & LED tapelight to avoid voltage drop.
- Ensure applicable wires are in compliance with local codes (In-wall rated, wet-location, high temperature, etc.).
- Recommended load for power supplies is 80%.

\checkmark required components to complete installation

- LED Tapelight
- Connectors (if applicable)
- Extrusion / Lens
- 24V DC Power Supply

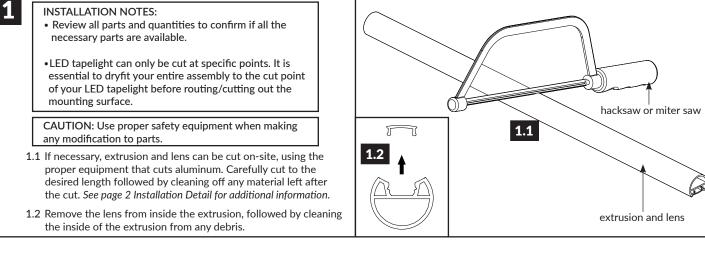

Tapelight DO-NOT basics

Assemble Parts Together

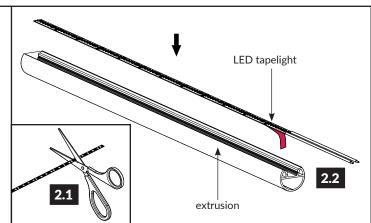

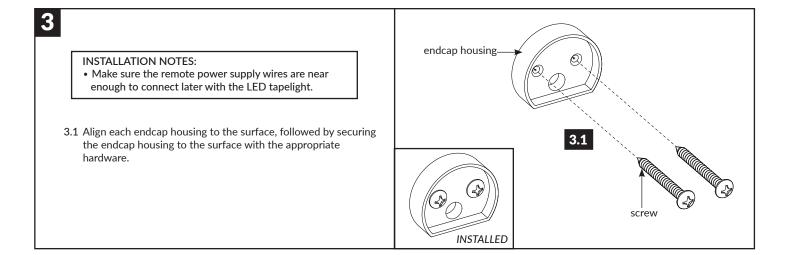

2.1 If shortening the LED tapelight, cut along the cut marks that are labeled in between the solder pads using utility shears.

2.2 Remove the red adhesive backing from the LED tapelight, then carefully apply the LED tapelight to the inside of the extrusion.

INSTALLATION NOTES:

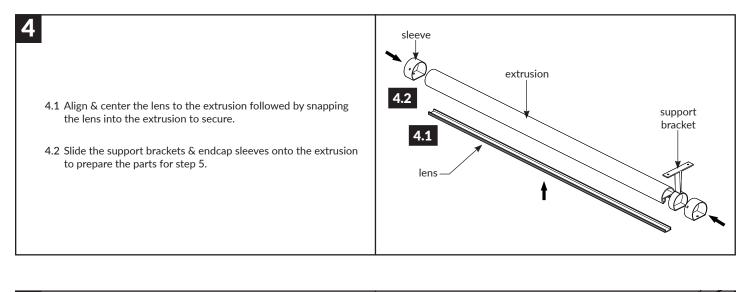

• Make sure not to cut the side of the tapelight with lead wires.

Assemble Parts Together

support bracket INSTALLATION NOTES: · Make sure the remote power supply wires are near enough to connect later with the LED tapelight. screw 5.1 Feed the fixture lead wires through the endcap. Make sure the extrusion wiring connections are in accordance with local & national sleeve electrical codes. For additional information, reference the power supply instructions. Also a general wiring diagram is on page 5. 5.2 Align the extrusion with both endcaps then slide each sleeve over an endcap. Secure each sleeve into the endcap by 5.2 tightening the 2 screws on the sides then the 1 on the bottom. 5.3 Slide the support bracket to the center of the extrusion and secure it to the surface with the appropriate hardware. If the -set screw extrusion is longer than 60", an additional support bracket is sleeve required. INSTALLED
