

## 4 WAYS TO SUSTAINABILITY & HEALTH AT TAG LIGHTING BRANDS

### 1. Efficient technology

Our LED products are inherently better for the environment due to a 50,000+ hour lifecycle and efficient energy use. More lumens per watt means less energy consumption, and high quality material means less replacements.

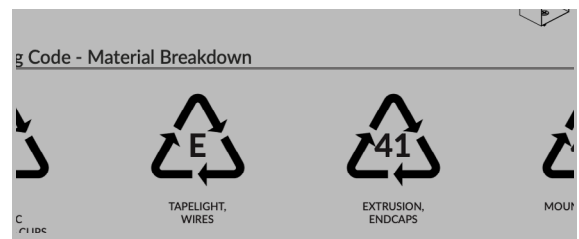

### 2. Circadian specifications

Adjustable color temperatures and flicker-free dimming offer a natural simulation of the sun, enabling healthier indoor spaces that can regulate our circadian rhythm.

### 3. Recycling

High quality, recyclable materials in our products translate to less waste for our planet. We divert aluminum, cardboard, office waste, and electronic components from landfills with a comprehensive recycling program at our headquarters. Customers also receive instructions for recycling on their own, or may return products to our headquarters for recycling at the end of product life.

### 4. Declare labels

We demonstrate market leadership in healthy materials and material transparency. With Declare labels, customers may easily make informed decisions about our products and support both human and environmental health.
